

PROBLEMS FACED BY THE SALMONID

MATERIALS:

note paper and pencil

"Environmental Problems Faced by the Salmonid in the Life Cycle Worksheet"

INFORMATION:

There are many problems faced by the salmonids at various stages of development.

eggs may be endangered by silty/sandy/muddy bottom, polluted/warm water, freezing, flooding, or lack of water

alevins face problems of poor gravel, silting, lack of water, freezing, flooding, or displacing gravel

fry have difficulty when there is no stream cover, predators, lack of water, or obstacles to migration

smolts have problems with polluted water, predators, lack of food, or disease

mature salmonids may be harmed by predators, fishermen, or disease

returning salmonids problems may include obstacles to migration, polluted water, fishermen, predators, disease, lack of water, or too much water

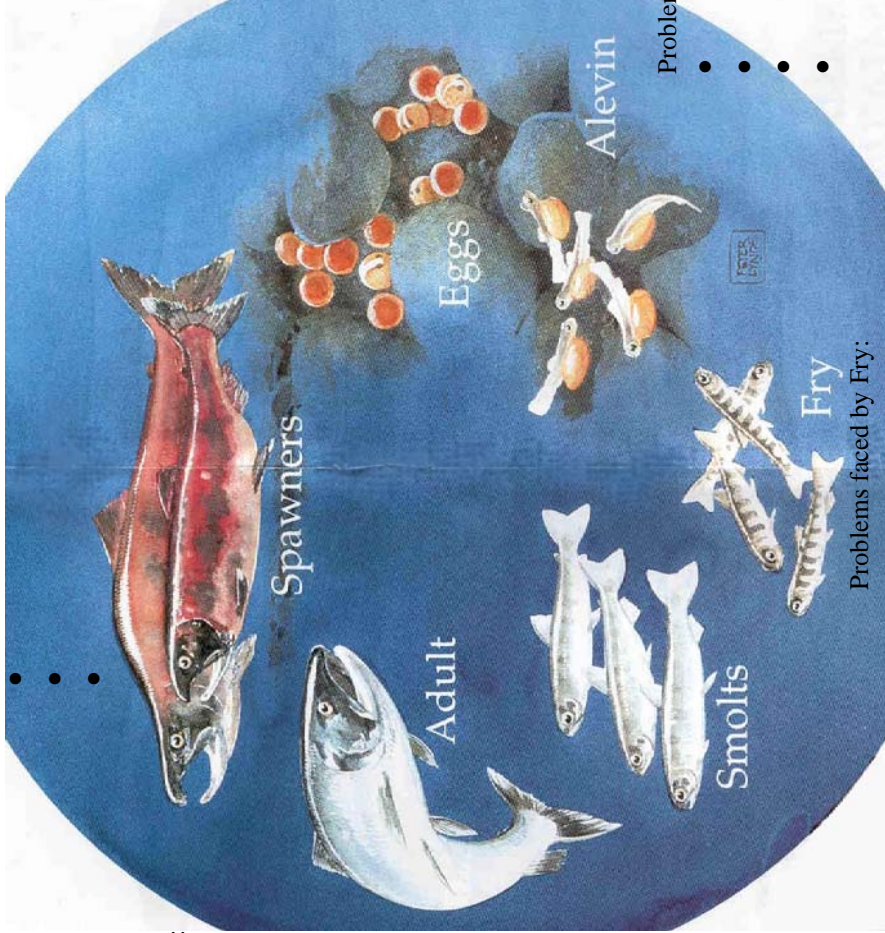

ACTIVITY:

complete the "Environmental Problems faced by the Salmonid in the Life Cycle Worksheet"
